

Makers of NuCrete™
The World's Only Stainless Concrete

Contemporary Concrete The Commercial RampSink

The RampSink is the most versatile of our line. Water flows down the ramp and disappears into an obscure slot drain. (IAPMO-Listed) Color, faucet placement and countertop area can be modified to meet your requirements. The geometric lines of the RampSink make it a natural selection for the most contemporary hotel guestroom, yet, in natural tones, these sinks are reminiscent of Tuscan laundry sinks.

Makers of NuCrete™
The World's Only Stainless Concrete

Bearing up under the notorious "fountains", NuCrete™ remains unstained by over 38 acids and oils.

Sonoma Cast Stone the Advent of Stainless Concrete

Architects and designers love concrete so much that they have talked clients into using it, despite the staining and cracking historically associated with this warm, colorful and sculptural material. After years of research, Sonoma Cast Stone has finally removed this hurdle with truly stainless concrete.

With this one-of-a-kind, trademarked formula, Sonoma Cast Stone's NuCrete products will retain their pristine, "like new" finish for years to come, even in commercial environments. Sonoma Cast Stone stands at the forefront of concrete innovation by mastering the craft and taking the production process to a higher level, producing surfaces that are almost four times stronger than building code requirements.

If you are currently planning a project, fax your schematics, measurements or drawings to us at 707.283.1899, and we'll be happy to provide a free cost estimate of your work done in our new, stainless NuCrete™.
