Concrete Ramp Sinks

The enigmatic Ramp Sink is perhaps our most versatile design. Front ramps, back ramps, side ramps, center ramps, all with great possibilities for color coordination. Water flows down the ramp and vanishes into an obscured slot drain.

The geometric lines of the Ramp Sink make it a natural selection for the most contemporary of buildings or homes. In natural tones, these sinks are reminiscent of Tuscan laundry sinks, and the overall shape begs pairing with our WaterBridge or Streamliner faucets. Color, faucet placement and countertop area can be modified to meet your requirements.

RampSinks can be made to “float” between walls or fit on conventional cabinetry.

“Falling Water”
BY FRANK LLOYD WRIGHT

The WaterFall RampSink

Inspired by Frank Lloyd Wright’s cantilevered masterwork, Falling Water, and premiered at the Sunset Magazine Idea House, the WaterFall RampSink is like a center-sloping RampSink with overlapping ramp elements in a cast concrete countertop. Water flows from the deck or wall-mount faucet to the top ramp and then gently onto the lower ramp and into drain. Allows the insertion of a second color on the top Ramp as an option.

Allows for constant drainage without soap build up or standing water areas. Slot drain replaces traditional drain assembly, so there is no visible hardware. This unit rests on designed cabinetry or on one of our specially made hardwood or modern metal stands. The hardwood stands are available in smooth or distressed finish (stained or unstained options).
